LOKESH REDDY MADDALI

Senior Data Engineer — Databricks | Snowflake | Cloud Data Platforms

lokeshreddy33221@gmail.com | (636) 577-9743 | linkedin.com/in/lokesh-reddy-a975551a1

PROFESSIONAL SUMMARY

Senior Data Engineer with 6+ years architecting enterprise-scale ETL/ELT pipelines and Bronze/Silver/Gold Medallion data models on Databricks, Snowflake, PySpark, Python, and dbt across Azure, AWS, and modern lakehouse platforms. Track record of standardizing complex source data — across insurance, healthcare, and banking — into governed, reusable data products with strong data-quality, reconciliation, and observability practices. Trusted partner to architects, analysts, and business stakeholders on data modeling, production support, and technical leadership.

CORE SKILLS

Databricks & Snowflake • Medallion Architecture (Bronze/Silver/Gold) • dbt / Data Quality & Reconciliation • Python / PySpark / SQL • ETL/ELT Pipeline Design • CI/CD & Cloud (Azure/AWS)

PROFESSIONAL EXPERIENCE

Senior Azure Data Engineer **Dec 2023 – Present**

Travelers Insurance | New York, NY

- **Architected and delivered** scalable ETL/ELT pipelines on Databricks (PySpark, Spark SQL, ADF), standardizing **50M+ policyholder records** into Silver-layer models across Snowflake and Synapse.
- **Engineered** Bronze/Silver/Gold Medallion layers using Delta Lake and Delta Live Tables, converting complex insurance data into reusable, **business-ready models** for analytics and ML.
- **Partnered** with architects, analysts, and business SMEs to document business rules and data lineage, keeping Silver-layer models aligned to **enterprise data standards**.
- **Automated** dbt-based data-quality controls and reconciliation testing, catching discrepancies **before they reached downstream models and dashboards**.
- **Resolved** production defects and **led** design reviews and architecture decisions, providing technical guidance to engineers and releasing changes through Azure DevOps CI/CD.

Data Engineer **Aug 2021 – Nov 2023**

CVS Health | Dallas, TX

- **Built** ETL/ELT pipelines on AWS (Glue, Lambda, S3, EC2) with Databricks and dbt, ingesting **EHR, medical claims, and patient demographics** into a Bronze/Silver/Gold lakehouse on Snowflake.
- **Translated** complex healthcare source data and business rules into standardized Silver-layer models, source-to-target mappings, and **observability/testing** practices for downstream analytics and reporting.
- **Profiled** data across claims, provider, and patient records to catch quality issues; partnered with SMEs to **resolve issues at the source**.
- **Implemented** Apache Iceberg on S3 for **HIPAA-compliant** patient data with schema evolution and time-travel auditing, documenting lineage for historical health records.
- **Architected** an AWS Redshift warehouse for claims, patient, and provider analytics, **delivering** Power BI/Tableau dashboards on patient outcomes and claim trends.

Data Engineer **Oct 2019 – Jul 2021**

Wells Fargo | San Francisco, CA

- **Designed** ETL/ELT pipelines (AWS Glue, Lambda, EC2, S3) standardizing transactions, loan records, and credit card statements into relational and **dimensional data models**.
- **Implemented** Medallion Architecture on AWS Data Lake and Snowflake, applying canonical/enterprise data modeling to meet **Basel III/GDPR** regulatory, privacy, and security requirements.
- **Automated** data-quality validation and reconciliation with dbt and Great Expectations, catching issues before they reached **credit risk models**.
- **Built** real-time fraud-detection pipelines using Lambda and Kinesis, and **mentored** junior engineers on pipeline design and troubleshooting.

TECHNICAL SKILLS

Warehousing: Snowflake (Time Travel, Zero-Copy Cloning, RBAC, SnowPipe), Redshift, Synapse, PostgreSQL, Teradata

Modeling & Quality: Medallion Architecture, dimensional & enterprise data modeling, source-to-target mapping, dbt, Great Expectations, reconciliation, observability, data lineage

Engineering & Lakehouse: Databricks, PySpark, Spark SQL, Python, SQL, Scala, Delta Lake, Delta Live Tables, Apache Iceberg, ACID, time travel

Healthcare Data: Medical claims, EHR, patient demographics, provider/provider-network data, HIPAA

Cloud & Orchestration: AWS (S3, Glue, Lambda, EMR, Kinesis, Redshift), Azure (ADF, Databricks, Synapse), GCP (BigQuery), Airflow, Kafka

DevOps & Governance: Git/GitHub, Azure DevOps, Jenkins, Terraform, Docker, CI/CD, Azure Purview, AWS Glue Catalog, HIPAA, GDPR, Basel III, data privacy & security

EDUCATION & CERTIFICATIONS

Master of Science in Information Technology — Webster University

Pursuing: Azure DP-203 (Data Engineering on Microsoft Azure) | AWS DEA-C01 (Data Engineer Associate)

Available immediately | Open to onsite/hybrid
